Ecublens, 15th September, 2025

**LEMO's position regarding
EU RoHS Exemption 6c renewal**

As a leading supplier of high-quality & high-performance Interconnect Solutions, LEMO is fully committed to ensuring its products are compliant with all applicable market regulations and directives.

According to Exception 6c of Annex III to RoHS Directive 2011/65/EU, our products are exempted for use of lead as an alloying element in copper up to 4%.

On 8th September 2025, the European Commission has published the Commission Delegated Directive - [C/2025/5961 final](#) - that amends Annex III and extends this exemption up to **30th June 2027**.

LEMO Group has started to work actively on alternative solutions with low lead (max. 0,1%) copper alloys, compliant with the RoHS 2 Directive once the exemption 6c will expire, and which meet the uncompromising LEMO quality requirements with the resilience of the whole value chain, thanks to close collaboration with our suppliers and other stakeholders in the full life cycle of our products.

Today, LEMO is already offering low lead products on request to selected customers so they can reduce health and environmental risks without compromising performance, while maintaining full compatibility with their existing solutions. Contact your local LEMO representative if you have a need for a custom low lead connector solution today.
